Browser History Spy Portable Crack + Download X64 (Updated 2022)

browser history spy records all websites that you visit with an icon or a number which you can click to see more information about your website. Features: browser history spy records all websites that you visit with an icon or a number which you can click to see more information about your website. browser history spy captures the process, the time and the browser that you use, capture the information into a logfile, which can be viewed by you or emailed to others. browser history spy also captures the websites that you view when you are on public wifi hotspots. browser history spy identifies your internet browser by the MAC address. browser history spy detects the websites that are blocked by your firewall. browser history spy remembers the number of times that you visit a particular website. browser history spy records the websites that you visit that are not included in your bookmarks. browser history spy records the passwords for passwords that you type. browser history spy records all websites that are visited on other computers in the household or the office. browser history spy is able to identify the location of the website. browser history spy also identifies visited websites which are previously blocked by your firewall. If you use some other program to spy browser history, BHPS will not detect that information. When you open the program, it will display all the information and websites that you have visited. When you click on the icon or number of the website, BHPS will open that page in a new tab in your default browser. Save as HTML file for the website that you clicked on, or save as XML for the entire list of websites that you have visited. Change the directory that you want to store the Firefox and Chrome history. Export the list of websites that you visited as HTML or XML. Change the name of the file that you export. Notepad will open automatically when you click on the export button. If you are having some problems with the program, you can write to the author at And also visit: PEWWWWWWWWWWWWWWWW 77a5ca646e

Browser History Spy Portable With Full Keygen

Browser History Spy Portable is a lightweight application designed with a single goal in mind: to help users view the browsing history for Firefox, Chrome, and Internet Explorer. Since this is the portable version of the program, it is important to mention that it doesn't leave any traces in the Windows Registry. You can copy it on any USB flash drive or other devices, and take it with you whenever you to need to view a list with the accessed URLs. Browser History Spy Portable boasts a clean and straightforward layout that gives users the possibility to generate a list with the visited links with just a few clicks. The application provides information about the accessed URLs, website titles, number of visits, as well as visited date. What's more, you can access the selected website using your default web browser, and export data to HTML or XML file format. Another important feature worth mentioning gives you the possibility to select the directory where the Firefox and Chrome browsing data is stored. For the Internet Explorer section, the application provides several dedicated tools, designed to help you add new URLs to the list, remove the selected ones, or delete the entire history. During our testing we have noticed that the tool carries out a task very quickly and without errors throughout the entire process. It manages to remain light on the system resources, so the performance of the computer is not affected. To sum it up, Browser History Spy Portable makes the entire process seem nothing but a child's play. It can be easily configured by all types of users, regardless of their experience level. What's New In Browser History Spy Portable?

• Extremely lightweight and portable application • Provides detailed information about your browsing history • View all history in a list format • Generates a log of all URLs accessed and browser time • Export to HTML or XML format • Compatible with all web browsers • Selects data directory • All data is stored locally on your computer "Browser History Spy Portable" - is a useful tool. I use it as a command line tool to see history of firefox in the case when internet connection is unavailable. The rest of the program is beautiful. "Browser History Spy Portable" is a useful tool, but it has a few minor bugs that could be easily fixed. 1) In the 'add' button it shows the current firefox location on the bottom right even when the dialog box is closed, even if it's being saved. 2) In the program description there's a small textbox on the right hand side where it says that there's no Internet connection. 3) The program asks for the path to my local repository even though I had already specified it in the 'add' button. 4) The "remove" button (and the "add") button have the same icon. 5) The program is designed to be run from the start menu. Why is it not in the applications folder? 6) The program should run faster in the 'add' button. 7) The program states there's no internet connection even though I already specified one. This tool is very easy to use and is absolutely invaluable. Anyone who likes browsing should use it. I must be one of the few people who has found this application useful. It's extremely easy to use, and I don't need to explain what it does. It's not going to make you very rich, but it will do what it's supposed to do. For example, I used it to track a site I used to visit on a friend's computer at home, and I found that it works very well. Overall this is a great program. If you are searching for a way to see the history of the sites you visit on your PC, this is the program for you. I have used it for many years, and it has been very easy to use. As mentioned in the previous review, this is a great application, with a very clear interface. You do not have to spend hours configuring a program to access a website's history and it is very easy to configure. One of the greatest features of this tool is that it does not leave a trace in the registry or any other type of hard drive, so it is not going to damage your computer. The program has no annoying ads or popups. Browser History Spy Portable is a great program and I would definitely

System Requirements:
