Boudreau was asked Tuesday after the Wild's 3-2 loss in St. Louis if he would go back to Koivu to try and spark the forward. "I don't need to do that. We've had this conversation. We did it on Monday night, and I think you know I've given my reasons why I'm leaving him off the first power-play unit," Boudreau said. "It was done in a nice way, but it was done. And I've got nothing else to say about it. It's done." "We're a team. We're not going to be a team until we're all pulling the same rope." Bruce Boudreau on Tuesday night's benching of Koivu Boudreau did not go into details about what led to the decision to pull Koivu from the first unit and put veteran Jason Pominville in instead. The first power-play unit for the Wild is Koivu, Pominville, Taylor Hall, Ryan Suter and Nino Niederreiter. Koivu is playing in his 500th career game and had a goal and an assist in the first six games this season. Pominville has one goal and two assists in six games this season. Edit and Continue: Make edits on your drawing while it's still loaded in memory. Choose the feature while the drawing is opened in the drawing program and you can view changes made while you're drawing. (video: 1:12 min.) Note: Note that "Edit and Continue" is not available for drawings that use certain CAD servers (e.g., ViewDraft). Timeline: Make great time-lapse videos. Click the "movie" button in the timeline to turn your drawings into a short movie. You can save the movie to an MP4 file or burn to a DVD. (video: 2:46 min.) Build/Measure Edit: Design even better building plans with more precision. B/M edit enhancements include: Support for measurements in the "Building Project" command: The "Building Project" command now supports drawing a new "Building Project" layout in the current drawing, based on a previous drawing. The new building project layout will contain the options available in

the current "Building Project" command. Additionally, the height of the walls can be changed or removed, a new roof section can be added, and complex line styles can be added for facades and windows. Adding new roof sections automatically: Adding new roof sections with a roof tab is now easier. All new roof sections are automatically assigned a roof section type (e.g., mansard, hipped, peaked, etc.). All roof types have common properties such as roof pitch, roof arc, roof gutter, roof tabs, and a new type of roof tab. Support for roof scale: Roof sections can now have their scale changed to inches or feet, and you can also have their height scale changed to linear feet or imperial. Linear feet are now an option: As an alternative to using the imperial option, linear feet are now an option when drawing roof sections. New height options: The height of a roof section can be set to inches, linear feet, or imperial. Support for beams: Beams are now an option when drawing roof sections. Support for roof gutter: Roof gutter options include straight, and two styles of roof gutter with a baseboard. Support for roof tabs: Roof tabs are now an option when drawing roof sections.
