

The new fantasy action RPG that takes place between life and death known as the Lands Between is now here. In a world of eternal struggle, a cast of warriors who can perform miracles and monsters that can destroy the heavens, the fight against evil begins, and an Elden Lord will be born. The ultimate fantasy action RPG where the fate of the entire world is in the hands of one person. Prologue A Sprightly Resolve A young girl named Xellos, who had lost her parents in the massacre of her village, was born a prisoner in the hands of evil monsters. Surrounded by monsters, she lost her hope of returning to her world. With young Nol (the Lord of the Elden Ring) as her adviser, he bonded with her heart. During the battle that destroyed her village, she was spared. As the three of them were engulfed in the flames of the bright light that appeared in the sky, their blackened hearts were replaced with those of the light. And thus, the day Nol met the Princess Xellos. Chapter 1 Skyland The Kingdom of Skyland The race that protects the sky. The quest for the elusive Elden Ring is underway. The simple, peaceful life of the small farming village vanished. The young village, which was rocked by the power of the arcane Rune that destroyed her village, has been annihilated. The young girl named Xellos, who was the one who lost her parents, has lost her hopes of ever returning home. "Master, that Elden Ring is enough. If you end it now, you won't have to give up the party. You won't be the only one who will lose their pride. Does the Elden Ring really need to go so far? Aren't there a few monsters left that we can't handle?" Nol's heart was full of anguish. "Who the heck would think such a simple thing as a prisoner could become our savior?" Llak. "I've heard that the Elden Ring can combine the various magics of other people." Loth, the most dangerous monster in the world, would be defeated easily if it was combined with other

The problem is, I've got a very huge data array which I need to validate. As the title, I need to validate the data before it's been submitted to server. This is the data I've got in the form { { "id": "1234", "username": "jason", "password": "123456", "created_at": "2018-12-12 16:34:12", "updated_at": "2018-12-12 16:34:12" } } And there's a textarea to input it: I've tried some methods, but none of them work for this situation. One of the attempted solutions was using a function which will loop the array and return a boolean value if the array is valid. if (formData.length === 0) { return ""; } const validData = data.map((row, i) => { if (row.length === 0) { return i === 0; } return i === 0 && row.length = 0 && row.length this.setState({ text: e.target.value }) save = () => { const data = {text: this.state.text} // bff6bb2d33
