Huge and immersive worlds, combined with minimal combat and exploration. Phil Spencer reviews themus: Theseus is a game where you're a cube of sorts floating through a futuristic space pod. Your job is to collect energy floating around in the space, which you harvest to save your friends trapped in more dangerous areas. The environments are very nicely designed and immersive, and although there are a few instances of slow-down, the game is very atmospheric and well paced. Gamestar Report (PlayStation VR review) With close co-op play, split-screen and a fully explorable world, Theseus is superb adventure. "It's more than a little unsettling to picture the little cube you're following floating through space in case he or she gets eaten by a sea monster or something. It is a really interesting idea though, and the puzzle solving element of it is satisfying and challenging." Games A Day (PlayStation VR review) The game features a beautiful art style and the environment is extremely immersive and vast. PlayGameCentral (PlayStation VR review) This is a game for VR fans who have seen the original and want to know what it would be like to play the sequel without the HTC VIVE. PlayStation.Blog (PlayStation VR review) Offering a taste of horror, the game of exploration and mystery found in the missing childrens' case file. As PlayStation VR heads into its first full year of availability, we've been eagerly awaiting the release of more VR games to join the ranks, and these are some of the first titles the public will start experiencing. Our second big batch of VR-friendly games launched this week, starting with the release of breakout thriller Heretic. Sitting in the middle of the \$14.99 USD price range, the game is initially billed as an escape room experience, encouraging you to focus on the task at hand and solve puzzles to escape from a demon-infested facility. It's a clever concept that breaks free from the typical VR teleportation teleportation interface to give players the chance to take in the game's surroundings in a wider sense while you engage with the game world. Immediately, Heretic reminds you of VR games like Surgeon Simulator, but with a much more intense feel to it that makes it perfect for action-reaction game players. Touching the floor with your PlayStation Move controllers will have you activating a pressure sensitive

Little Bob Dog is a brand new endearing adventure game with playful and often funny aspects. Little Bob Dog was originally designed and made by me, the developer. Throughout its development, my goal was to make a game for both children and adults. This game is about risk, fun and discovery. The look and feel are playful and casual. You can jump over all things but you have to get Bob to jump. I often give my game away for free but I also sell physical copies. You can see my game list on the contact page. Feel free to contact me if you need further details, games I sell or anything else. Do you like animals? You will like Little Bob Dog, it's true! What the ****!?! How can you expect an indie game to be 100% awesome from the get-go? Whenever I see posts about indie games that show off screenshots with 20,000,000,000,000 stars, i get pissed off. The number of stars don't indicate whether or not a game is worth downloading, there's no way to know for sure by just glancing at a small screenshot. They might be indie games, with many unknown developers, who don't even have a decent budget, nor don't know how to make a game. Stop pretending. Now, im not going to go so far as to say that indie games should be treated like nuclear launch codes. but i do think that we should be a bit more discerning about how/when we give press lines about them. When I'm approached about a review, I'm more than happy to do so. I would absolutely love to get to play an indie game that im not familiar with, and review it, just as I would love to write about a AAA game if im not already familiar with it. I'm not claiming to be impartial, just not at all. I will (hopefully) be pleasantly surprised by the beauty of the game, the art, the music, but I'll be honest about my expectations. This has nothing to do with flashing numbers, or anything to do with the original topic. But it seems to me that every time I see a review of an indie game, I can tell from the first few sentences that the reviewer was invested in the game, or played it extensively. To me, this screams unprofessionalism, with no regard to who the game is
