Best editor eva pimp. Ability to blend in missing details is amazing. I use it with the press and audio by combining footage which way pretty cool. I still rule at Sound Edit and Sound Mixing work. If CC will bring in robust enough hardware, I may make the jump to CC. The one thing I have are AE and Lightroom are now PARALLEL. Does CC work that way? I don't know just yet. I am loving the Layers. I can even make one super tall layer with the title and a text object with RGB colors. Now for software I will switch. Do we still have to see a new quick-paste? I love it. Barely got a chance to play with it at the airport. First impressions are very good. It looks like the new PS from the ACR concept. I would like to see the new software work as a Photoshop application, it seems like it would be more productive. Photoshop had a vision about what post editing could be. It is somewhat the ability to cut and paste imagery into one composition and move all Photoshop changes in one for, like the layer and photoshop can now be extended to the content creation side of the house. There are many good features in this release, but I see myself spending most of my time in the labs and under the hood. Here are some of the things I'm excited about:

- Workflow: Stitching, Tiling, Grouping, Reverse group, Smart objects
- Technology: Unique Lens Blur filter
- Technology: Polar Coordinates
- Technology: Radial Filter (my favorite)
- Layer Panel: New rotations and rotation tracking
- Technology: Smart Brush
- Technology: Blend modes

Editing: Ability to convert to an HSL/RGB image, "Edit in place" (read-only), Motion Blur (read-only)

Export: EXR support, HDR, 4k files
