This video shows how to do the following in Photoshop: editing a photo's exposure and white balance via the Color Picker; using the Content Aware Fill tool to fill a photo with a solid color; adding graduated filter effects to photos; creating a gradient overlay; using the Adjustment Brush to add a layer of color, or gradients, over an image; making sure a solid color fills the whole image; applying a pattern to fill an area; and combining different layers and effects for photo retouching. The best part is that the process is all done in the browser. The interface for Photoshop was inspired by Tom Dillard's book, Daredevil . When creating something, one's mind is working so fast that it is easy to make mistakes as you start out. Daredevil shows the sheer breadth of time and work that the people involved in each character's life put in. Customizable Toolskit: The “customizable tools” feature, with which you can create your own tools, saving your time as well as your money. Some of the tools you can easily make as your own are the “Spatial Adjustment Brush”, “Lasso & Selection Tools”, “Special Effects Tools” and “Shape Tools”. With this, there are more options for you to create a more satisfying result. **Tulpen:** One of the biggest updates introduced in the past 10 editions of Photoshop, “TULPEN”, or the “Utilities”, are also introduced in CS6. This Tool is made especially for the multi-purpose toolbox where you can add your own tools. You can even add “Crop to Rectangle”, “Swatches” and “Colors”. This new version of Photoshop brings a host of new features and enhancements, including:

- One-click registration for an image.
- A Delete/Fill option for objects in the image.
- Highlight importance-based ranges, such as hair and highlights, that can be easily removed.
- Image adjustments and adjustments applied to a selection window.
- Brush strokes shared with selections to clean up selections.
- An intelligent crop tool that creates a mask that matches the edges of your selection.
- Auto-flatten options for layers that are specifically selected.
- Clipping options for masking either a specific portion, or the entire image.
- A flagging tool that lets you know exactly where the edge of an adjustment is applied, and that adjustment is applied everywhere the flag is toggled.
- The ability to protect edits. This means you can lock in settings that you are happy with, so that clients cannot accidentally change essential edits.
- Paint controller for instant image masking.
- “Smart guides” that assist in the setting up the perfect image for print and monitor
- Numerous other enhancements.

Another cool feature is the ability to apply multiple adjustments to sections of a photo. You can now do this in one fell swoop. You just opt to apply a new adjustment layer to the part of the photo that you plan to improve and then apply the adjustment. If you want to make an adjustment to the entire photo, you create a new adjustment layer and that layer becomes the new topmost adjustment layer. This allows you to freely merge later adjustments into one layer. As a result, you won't get any changes showing up with a wrong adjustment layer order. Wow! Other cool features include the ability to use the Healing Brush (but only in the brushes panel of Photoshop) and the Paths panel. While the latter lets you create a path, delineating the shape of an object in a photo, the Paths tool lets you create and edit a complicated linear shape with an outside edge and a fill. Adobe announced support for the high-quality service Lintelight to work on documents or media files directly and easily from a Lightroom catalog. Lintelight is a free web service that can quickly upload, communicate and edit files, even as they are being shot. Adobe announced strategic relationships with leading creative communities and social media influencers to integrate its Document Cloud, HTML5-powered editing capabilities and its IPF of Image Workflows. The Document Cloud allows users to edit and store digital assets directly in the cloud and access them on a company intranet or directly on mobile or desktop devices. HTML5 editing features take full advantage of modern web capabilities to enable users to create, edit and manage text, vector graphics and rich interactive content with a single application. The IPF of Image Workflows addresses the need for collaboration and sharing of imagery in workflows that includes social media.
