When a boy finds a strange object, it begins to destroy his entire town. So he and his sister go to the other side of the world to find a plan to put the object in place that can slow down the time. There they meet new friends, find out more about the object, and then their own destiny begins. The acting is amazing. Jon Voight is just as great as he was in "Executive Decision". Besides, Voight doesn't even have the showy musical numbers this time. If you haven't seen this movie and just started watching TV, just stop right now and go watch. By the time you finish, you will be ready to watch the next one. I promise.Q: How to deploy test modules to my Vuejs application I have a visual studio 2017 project with the following structure: How can I configure my build so that when I run "npm install" my test modules can be installed to the project? I'd like the structure to be like so: Any guidance will be greatly appreciated! A: Assuming your test modules are a folder called src-test, you can use

the -t flag of npm install to set the destination to be just that folder, and it will install modules into it. Here are some example output from bash. \$ npm install -t {YOUR_PROJECT_FOLDER}/src-test Added module {YOUR_PROJECT_FOLDER}/src-test/node_modules/graphql/graphql Done, without errors. You can also install the package directly into your main project folder using npm install -g. Keep in mind that any modules in your main project folder will be copied over as well.
