AutoCAD Crack Free Download has grown into a widespread software application for drafting and design work, used for 2D and 3D design of mechanical, electrical, architectural, automotive, construction, and architectural projects. AutoCAD Cracked Accounts commands AutoCAD is a vector graphics program that creates a data-base of drawing objects (lines, circles, rectangles, polygons, arcs, paths, splines, text, and dimensions) and their corresponding graphic display commands. Such commands are processed to generate a drawing (a picture or diagram of a set of objects or scenes), such as a set of buildings in a city, a schematic diagram, a wiring diagram, or a plan. A geometric object is represented by the command that is invoked when the object is created or modified. The command consists of a command block, which is processed to generate the appropriate graphics display commands, and a graphical representation of the object, called the graphic. A typical AutoCAD command is the basic rectangle command (R) which creates a new object, called a "rectangle", and activates it. The command block may also create an "object" in the form of a circle, arc, or a spline, and the block may also delete an existing object. Each of these commands is associated with a command text, which defines a command or performs an action. AutoCAD command text can also perform menu choices, create dialog boxes, display menus, and display a help window. Within the command block are parameter settings, which define the "variables" of the command and can be: Changed during creation, Reflected in the object created by the command, Edited during use, or Automatically generated by the software. The parameters of the basic rectangle command are the "Horizontal offset" and "Vertical offset" which specify where the new object is to be placed on the page; the "Width" and "Height" which define the shape of the object; and the "Style" parameter which defines the properties of the object, including color, font, and text style. Other parameters may be included in the command block to modify the properties of the object as it is being created, including commands for filling and stroke, the use of layers to control which object is visible, and object-specific parameters. The graphic of a command is generated by processing the command text. Text is processed using a "
