Bandai Namco Entertainment, Inc. develops games for all types of audiences. We love to create action games that push the limits of innovation, such as in Ni No Kuni : Wrath of the White Witch and Katamari Damacy: Forever Spinning. With the slogan "I'd rather make a game I love than a business game," we employ the greatest talents from every department to create games that will excite our fans. Calluses and callous-like areas represent a histological correlate of hyperkeratotic changes in diabetic foot syndrome. Calluses and callous-like areas are parts of the human keratinized foot tissues. In human foot ulcers, these zones are almost always exposed to the external environment and are considered to be the site of infection. In the diabetic foot syndrome, we evaluated whether these zones represent the site of severe infection or at least part of the protective barrier against microorganisms colonizing ulcers. In 60 biopsies from patients with insulin-dependent diabetes mellitus, the depth of the "callus" zone was histologically evaluated and graded from 0 to 4. In each case, ulcerative areas below the callus were analyzed separately and graded from 0 to 3. Areas representing a grading of 4 or more were called "callous" and regarded as hyperkeratotic. Histological analysis showed a statistically significant difference between the depth and grade of the "callus" zone and the ulcerative area. A gradual increase in the depth of the "callus" zone was also observed as the grade of the ul
