When I click the shell file to launch it, it opens up but then it just says something about my server crashing for a second or two and then closes again. And it's not a build up because I have it so it will keep the server up for even ten minutes before it crashes. Please help! I would recommend disabling the server-side client libraries - but as far as the actual problem I have no idea, I haven't actually played on a Linux server yet. But go into the server options and set the client-side libraries to none Linux needs to have the libraries installed aswell. That's why it's a bit more difficult to set up a Linux server. You can link the libraries to the game manually, but this is a bit of a hassle to make sure you link each library the correct way (hint: if a package is in /usr/local/lib for example, you would need to add -L/usr/local/lib for example to the "shared library" statement) Oh - and yeah, I should say: I don't have a Linux server, but I do have a Windows one :P But anyway, if your server is crashing - you should really contact support@steamgames.com, sorry, but it's something I can't really help you with anymore If you try to access the server to see if it is still crashing, like has said it's quite hard to do this. I would recommend going to the Steam Website and searching for how to use your error reporting system (you should be able to find the link on their main page), then use that to send them a report. I have the exact same

problem as the other guy posted, I can't use the server in my linux environment, when I open my log folder there is a console error that said "fontconfig warning
