An X-ray CT apparatus performs scanning of an object to obtain 2-dimensional projection data from which tomographic image information is reconstructed, and displays a tomographic image based on the

obtained information. The X-ray CT apparatus performs radiation on a focal point as a detection target, scans the focal point at high speed, and accumulates transmission data of the focal point. A tomographic image is reconstructed from the obtained data. The object is irradiated with X-rays at different angle directions for each radiation period, and data are accumulated for each of the angles. It is desirable that the radiation is performed as rapidly as possible to reduce the time of radiation in the X-ray CT apparatus. However, if the radiation amount is limited, image quality may deteriorate. An image quality deterioration due to the limited radiation amount is compensated for by adjusting the imaging conditions for each of the angles. A technique for such adjustment has been proposed.

Specifically, the technique adjusts imaging conditions such as tube voltage, tube current, and rotation speed of the detector to reduce contrast difference between the reconstructed tomographic image at a current radiation angle and the tomographic image reconstructed from the data obtained at the same position in the previous radiation angle. Specifically, as depicted in FIG. 16, tomographic images reconstructed from data obtained at two angles different by 90 degrees are respectively displayed on the monitor. An adjustment of the imaging conditions is performed so that the contrast difference between the images is reduced. FIG. 15 depicts such adjustment. As depicted in the figure, adjustment is performed so that the contrast difference between the tomographic images is reduced by changing the imaging conditions (setting the tube voltage V_d , the tube current I_d , and the rotation speed D_d) for each of the angles at which the X-ray irradiation is performed. Photo Scissors Pilot, the first app to offer interactive image processing is a photo editing application that reveals the precision and art of the image to the avid... By far the best one I have used for making small adjustments to a picture. Approximate price of purchase: \$18.00 US From within the app you can: - Change brightness, contrast, saturation and hue. - Change exposure. - Select edges and objects to remove. - Position a "finger" where you want a piece of the picture to be replaced with an edit (this is basically a brush tool). Sometimes it gets too detailed, and may find it over engineered for a casual user, but if you're serious about color adjustments, Photoshop or Lightroom are far too complex. One thing that I don't care for is that you can't keep a link to previous selections. This means that to reuse any selected area, you would have to start over. I think this would work great if you could re-edit the selected area without losing the link to the first one, and if there was an undo option. The app itself works well. It allows you to manipulate layers of the same image, making minor changes in more of an "after the fact" sort of way. You can move through steps but it is a clunky process. It is in the process of developing a "Pro" version which should include the ability to link previous selections and being able to cancel. When editing a layer of the same image I was able to see the changes in the other layers. I think this is a good way to work, where you can save each little adjustment on a layer, and than "merge" (as called by the software) them all together, making one neat image. I believe this would be a nice feature. I also found a few other "bug"s, like when I selected a layer than clicked the background area around the image, the reverse was not allowed. One thing I didn't like was the ability to change the scene I was in. I would love to be able to start with a scene I already saved. Overall, its easy to use, and a good alternative to Photoshop. Update 1/14/2012 This app was recommended to me. Approximate price of purchase: \$18.00 US Pros: - quick and easy to
