I'm trying to use JPA field expressions to test for a property being null, do something different if it is null or an empty String, and otherwise act as if it contains something. I'm writing a @PreUpdate method that would do exactly that. What would be the correct way to test that the property is null, and if not null, test that it contains something? Gameplay It's been a year since the Empire was overthrown and I was sent to a distant land, the Lands Between, to raise the flag of the Elden Ring. It was a land made up of continuous fields, where even the smallest of the three legendary beasts (Gigantic, Gatekeeper, Goblin Mantis) resided, and where the Sky
