This means you can see all of your edits in the browser tab when you're working on a desktop computer, and through multiple interfaces when you're using Photoshop Elements. From the new Edit tab you can open an image and download it to your iOS device and tablet, or you can open the image in a browser tab and work on it from there. Images can be saved to your iOS device's album or desktop for future use. The new Select tool, better known as the Magic Wand, now includes an eraser that lets you quickly erase an area of an image, as well as the ability to select smaller areas of an image. This feature also enables you to select a line as you move the tool around an image, so you can quickly select curved areas of an image instead of using the Curves tool to edit it. The Highlights layer now includes a new automatic adjustment feature, called Adobe Levels. When you're in the Adjustment panel and select the Levels tab, you can use this tool to adjust the highlights and shadows of an image as a pop-up menu. A new Content-Aware Fill tool lets you quickly replace or remove an existing object in an image using an easy-to-use interface. Using this new tool, you can select the object that you'd like to replace or remove, and it will intelligently detect and fill in the transitional areas in the image to create a seamless replacement or removal effect.
