Thankfully, the speed issues can be mostly circumvented if you work without a display connected to the iPad Pro. Of course, it also helps to choose the right mode, which this review points out. All in all, Photoshop is a great companion app and a feature-packed piece of software that does work well on the iPad Pro. It addresses most of the issues with the iPad Pro, thanks to the powerful performance and stability improvements. The reviews of the MacBook and MacBook Pro - which I think are contradictory - seem for once to agree regarding the lack of a proper multitasking window, because the iPad Pro is the Multi-tasking Plus. It keeps the window from floating over your app. I never had any problems with Photoshop in portrait orientation due to the loss of such real estate, which I think is a rather important part of the iPad experience. From a design point of view, I'm very pleased with the work that goes into the design for Photoshop Sketch. I saw more desktop and mobile apps struggling to be great to look at than I did for Photoshop Sketch, which I think is a nice testament to Apple's design team. There's an expressiveness that I haven't found in other apps, and you can really appreciate that in Photoshop Sketch. I would feel comfortable telling you and others that you won't find anything better than Lightroom for image management and editing on the iPad Pro. The fact that Adobe made such a major improvement in this area for the iPad Pro is a major step forward and something that Apple should be very thankful for. I would imagine that some customers will be a little disappointed with the lack of Touch ID support and the inability to use the Procreate app to draw on photos, but I personally feel that the ability to use an iPad Pro when editing photos and designing websites when you're iPad Pro is a major step forward. If I was Adobe and had to choose between the iPad Pro and the MacBook Pro in terms of future-proofing, I would have to choose the iPad Pro, hands down. I do wish that Adobe would have pushed the envelope a little more with its creative ecosystem and with more fundamental innovations than the iPad Pro that go so deep into the experience. However, one cannot fault Adobe for taking risks. Its image editing software is important enough that it has to be pushing the envelope. I can't wait for the Photoshop Competitions to start next year, by the way. Such competition opportunities will also expose more issues and bugs than you might see in the typical Photoshop release.
