Adobe's Photoshop CC was the first company to offer integration with the iPad in a desktop—the options are contained within Photoshop itself. Previously, mobile users had to use Android or Windows apps to continue the workflow with their tablets. The majority of desktop users had to resort to using Linux, Apple, Chrome or Firefox in order to get their work done. Adobe Photoshop CC for iOS can not only display 90% of the natively supported file formats but also import photos in several ways, including as Raw, DNG, JPEG and PNG files. This import capacity is dependent on the iPad. In addition, the tablet display of native resolution of 1,024 x 1,536 pixels allows users to seamlessly zoom into work, and one can easily crop or place any control within a layer. When it comes to templates and libraries, you can open, import and export them, much like any other files type. A set of template files of 15 different types are available from the start screen. You can also import camera or camera RAW files. Importing files into Photoshop from the iPad can be rough, especially if you have many photos at once. This is due to a lack of buffer space, but more about that later. Adobe Creative Cloud is your first big chance to get an upgrade to Photoshop CC 2014. With this upgrade, the company even claims that Adobe Photoshop will work optimally on the iPad. Previous versions took advantage of USB-based drivers which made working with them a bit tricky. Now, users have two options for the iPad Pro and its Pencil, the Smart Keyboard and the Bluetooth Smart Keyboard cases.
