This new tool, dubbed Photoshop Browser for Web, gives you access to your desktop image editor, and brings all of the creative power of Photoshop to web pages. You can instantaneously use any brush and adjustment layer style, apply any filter or adjustment, implement any detail-oriented feature, and shape content like never before on the web. To help that along, Photoshop and Photoshop Elements now share a unified file format, PDF and layered PSD functionality, and even have a common export format. This common feature set between the apps will be expanded to enable more integrations with other Adobe and non-Adobe products, such as publishing, content management, E-Learning, and much more. Illustrator has been doing a lot of ground-breaking work in this space, making the best vector graphics available in a browser and Android apps.

You can personalize each image in the gallery by adding a title, description, and the ability to add tags to the images to search for, share and sort the images according to your preferred parameters. **Layer Comps:** With Layer Comps, you can now create an automatic composition of any two images, stretching and warping them both to make one composition. For instance, imagine a photo of your family on your holidays, and a photo showing your house from the outside.
