Lastly, I should draw your attention to the "Go to Pixel" feature; the ability to click anywhere on an image and instantly edit that specific pixel. This is an extremely useful function as we all know, and provide you with the opportunity to make minor adjustments without stretching out the image a lot. These are otherwise minor additions to Photoshop; however, they prove useful and I would like to make sure that they are highlighted. Continuing with the theme of small and efficient iterative updates, the new Camera RAW Web Bridge has been introduced. It is an online image browser and editing tool that has been specifically created with artists, designers, and photographers in mind. This innovative feature enables quick image zooming, cropping, and rotating, and previews can even be created from mobile devices, all of which are useful functions for digital-based driven artists. Moving on to talking about the recently introduced features and updates, Adobe may be a strong company, but many were worried if it was going to provide a good and stable upgrade to its families of software. However, after using the latest version of Lightroom, you will be surprised and in awe at how large some of the new features and improvements are. These not only further add to the capability of Lightroom, but also increase the overall usability of the tool. Don't get me wrong; however, there are a couple of drawbacks; with a large number of new features and updates, a chance of crashing the application during a work session is probable. If you are planning on spending hours getting your edits done in Lightroom, worry not, as it will likely not crash and halt your workflow. It has the potential to overwhelm some users who have never used extensive features of the application before, and this is why caution should be exercised while using it. However, this shouldn't be an issue for most users.
